Vitamin D and its relationship with respiratory and atopic disease: Results from the Growing Up in New Zealand

Impartida por el Dr. Cameron Grant, Head of Department - Paediatrics: Child & Youth Health. Professor in Paediatrics, The University of Auckland. Paediatrician, Starship Children’s Health Park Road, Auckland, New Zealand

Dr Cameron is the Associate Director of Growing Up in New Zealand, which is the New Zealand's contemporary longitudinal study tracking the development of approximately 7,000 New Zealand children from before birth until they are young adults. The study is designed to provide unique information about what shapes children’s early development and how interventions might be targeted at the earliest opportunity to give every New Zealand child the best start in life. Dr. Grant’s research focuses on the prevention of disease and improvement in health by immunisation or by improved nutrition.
