<th>Project Number: 505469-LLP-1-2009-1-ES-KA3MP</th>
</tr>
</thead>
</table>

Diagnosing an Internet connectivity problem

## Keywords

Internet, IP, computer network, network administrator

## Information about students?

### Age Range and grade of the learners

Over 18 years old, enrolled in CISCO certification program.

### Special characteristics of learners

- Not applicable -

## The learning emphasis?

### Learning subject / field / skills or dimensions

**Learning subject:** Connectivity Troubleshooting  
**Field:** Computer Networks  
**Skills:** identification, analysis and solving connectivity issues

### Specific Goals

At the end of this course students will be able to:

* identify the elements of a computer network  
* diagnose connection troubleshooting  
* read a map

## The teaching emphasis?

## Description of the game

**Narrative description of the game plot**

The player is a network administrator, called by a colleague to identify and solve a connectivity problem. First he has to go in the indicated room and find the computer that doesn’t function normally. He has to discuss with character (Roxana) and to solve the problem.
### LLP – KA3 ICT multilateral projects

#### Goals
Identifying and solving the problem

#### Characters
Secretary (Roxana)

#### Scenes
- **Scene 1** – Player’s office
- **Scene 2** – Front office
- **Scene 3** – Computer desktop
- **Scene 3** – Building hall
- **Scene 4** – Servers room

---

#### Narrative Description of learning activities - step by step organization and structuring

**Before the game:**
Presentation of different scenarios related to the subject – by the trainer. Short explanation about the game

**During the game:**
The game is played by each player; the trainer supervises the class.

**After the game:**
Discussions about the results; encountered problems in solving tasks. The trainer will evaluate students and he will discuss for solving wrong assumptions.

---

#### How will I evaluate students?

**Evaluation approach**
- Assessments reports produced by the platform
- Monitoring during the game
- The time needed for finalize the game

#### What will learners need in order to achieve learning objectives?

**Prerequisite**
- English – basic level for reading and technical terms
- Computer use – basic level
- Browsing ICDN course.

**Settings and materials**
- A lab with blackboard and computers for each student
- “Diagnosing an Internet connectivity problem” game

**What is needed to implement the scenario?**

**Applications involved**

- Mandatory: <e-Adventure> platform
- Email account (for evaluation)

---

Project Number: 505469-LLP-1-2009-1-ES-KA3-KA3MP

### Other things to consider

This scenario can be adapted for a wide range of courses with items of internet, computer networks included in the curricula. It is very useful because you don’t have all the time access to real equipments to simulate different situations.

Can be applied more successful at end of the courses.
