The purpose of this subject is to provide students with scientific, conceptual, methodological and practical knowledge about translational medicine. Specifically, the genomics and epigenomic bases will be assessed, as well as their applications in translational research. These concepts will be integrated with the study of the signaling pathways involved in various diseases and their functional role.

The overall objective is to provide a scientific basis for the design and implementation of translational research, and the knowledge related to relevant methods, techniques and applications in biomedicine.

**COMPETENCES TO BE GAINED DURING THE STUDY**

**Generic**

G1: Capacity for learning and responsibility (capacity for analysis and synthesis, to adopt global perspectives and to apply the knowledge acquired/capacity to take decisions and adapt to new situations).

G2: Learning skills that are necessary to undertake further research studies with a high degree of autonomy.

**Specific**

S1: Understand the basic, clinical and therapeutic principles of different pathologies

S2: Learn the procedures and methodologies used in translational studies

S3: Become familiar with the development of biomedical research and learn the basic tools for translational research

S4: Ability to explain the basic molecular principles underlying pathologies, ability to understand the role of genes in human cancer and the basic concepts of oncodrivers and targeted therapies.
1. Basic Principles
   - Introduction
   - Role of epigenetics in human diseases
   - Personalized medicine in oncology
   - Molecular pathology in oncology
   - Principles of genetic engineering
   - Immunology and cancer
   - Principles of experimental Design
   - Bioinformatics and Managing of Big Data

2. High throughput technologies
   - Gene expression
   - SNP array, CNVs and GWAS
   - Exome sequencing
   - Methylome analysis
   - Single Cell Genomics
   - Proteomics

3. Signaling pathways
   - Signaling pathways.
   - Resistance to molecular therapies
   - TGF-beta signaling in liver cancer

4. Genomics in cancer
   - Molecular classification of hepatocellular carcinoma
   - Targets for therapies in pancreatic cancer
   - miRNA in human diseases and digestive cancer
   - Angiogenesis: Drugs & mechanisms of resistance
   - Colorectal cancer: genetics and genomics
   - Molecular classification of breast cancer
   - Molecular therapies and immunotherapy in melanoma
   - Immunotherapies in cancer
   - Role of adult stem cells in cancer

5. Genomics in other diseases
   - Next generation sequencing in hematological diseases
   - Pluripotent cells in translational medicine: recent advances and open problems
   - Chronic Hepatitis C: from genotyping to therapies
   - Liver portal hypertension and fibrosis
   - Inflammatory disease / Crohn's disease
   - Inflammatory bowel disease (IBD)
   - Translational medicine in Alzheimer disease
   - Translational medicine in Parkinson disease
   - Translational research in psychiatric disorders
   - Genomics in Multiple Sclerosis
   - Genomics in autoimmune encephalitis.
   - Genomics in autoimmune diseases
   - Endocrinology
   - Translational medicine in renal diseases
   - Fetal and perinatal translational medicine
   - Translational research in cardiovascular diseases
   - System biology in lung diseases

6. Trial design and Biomarkers
   - Innovation in translational medicine
   - Translational medicine: implications in trial design
   - Statistical principles for clinical trials
   - Trial design and innovation.
   - From Bench to Spin off

METHODOLOGY

Total training hours: 8 credits ECTS x 25h/credit = 200h

a) Face-to-face training (72h): Lectures and Seminars
b) Home training (128h): Individual and group work

EVALUATION

Evaluation criteria: 50% of the final score will depend on the attendance and active participation in class. The remaining 50% will be obtained through a written exam. The written exam will be based on a multiple option test. To pass the subject, students will have to fulfill three requisites: Attendance-score ⩾ 20/50, exam-score ⩾20/50, and overall score (attendance + exam) ⩾ 50/100.

Reevaluation: In case of failing the ordinary evaluation (overall-score ≤ 50/100), students that have a minimum of 1/3 of the exam questions correct will have the chance to be re-evaluated. For that, they will need to present a
critical appraise of 3 scientific articles in front of an evaluation committee. The re-evaluation final score will never get over 50 points. English will be preferred in the presentation, but Catalan or Spanish will be also accepted.
