

# SEMINARIS/CONFERÈNCIES DE RECERCA

## HOW TO DIAGNOSE APHASIC DEFICITS

*Matti Laine*

[Department of Psychology](#), Åbo Akademy University, Åbo-Turku, Finland

This is a basic clinical introduction to the diagnosis of acquired language disorders (aphasia) in adult neurological patients. It shortly reviews the classical syndrome approach (e.g., Broca's and Wernicke's aphasia), as well as the more recent cognitive neuropsychological approach. Some simple methods for a quick bedside screening of language abilities will be highlighted specially for the use by a neurologist, neuropsychologist, or neurolinguists.

**Organitza: Cognition & Brain Plasticity Group ([www.brainvitge.org](http://www.brainvitge.org))**

Coordinador: Dr. Antoni Rodríguez Fornells ([antoni.rodriquez@icrea.es](mailto:antoni.rodriquez@icrea.es))

Dia: 2 de desembre de 2009

Hora: 15.30 / 17.30

Lloc: Sala d'actes, 1<sup>a</sup> pl. Pavelló de Govern  
Campus Ciències de la Salut de Bellvitge
