Implicitization of de Jonquières parametrizations

Aron Simis

Universidade Federal de Pernambuco

One introduces a class of projective parameterizations that resemble generalized de Jonquières maps, defining a birational map of projective n -space onto a hypersurface. From the implicitization viewpoint this work is related to recent work of Benítez-D'Andrea. The results may have interest from both the theoretic and the applied sides.

This is based on joint work with H. Hassanzadeh,
