A group of students of the master of Reservoir Geology and Geophysics won the second prize of the EAGE Minus CO<sub>2</sub> Challenge in 2020

The Green Team, a group of students of the master of <u>Reservoir</u> <u>Geology and Geophysics</u> (UB-UAB) of the Faculty of Earth Sciences, was selected amongst teams from all over the world to pass to the final phase of the <u>EAGE Minus CO<sub>2</sub> Challenge</u> in 2020.

The Minus CO<sub>2</sub> Challenge is a competition organized by the European Association of Geoscientists and Engineers (EAGE), and sponsored by the companies Equinor, Schlumberger and Total in 2020, in which the students are challenged to develop a hydrocarbon production plan from a subsurface reservoir with zero CO<sub>2</sub> emissions and economically viable.

The Green Team was integrated by <u>Mahdi Bakhtbidar</u>, <u>Dayana</u> <u>Abreu</u>, <u>Zeina Naim</u>, <u>Álvaro Solano</u> and <u>Raha Hafizi</u>. All of them have studied the master during the academic year 2019-2020. After having passed through the semi-finals, they competed for the prize with two other teams. Finally, the team placed in the second position.

Well done, Green Team!
